

# QUARTZ INFRARED HEATING

## The Original 3kw RedRad Quartz Infra-Red Swivel is back by popular demand!

After decades of success in the market it's clear this tried and tested infrared heater hasn't lost its appeal. Its performance, manoeuvrability and robust design makes this spot heater perfect for use in exposed environments.

The swivel head is fitted with two individual 1.5kw clip in quartz halogen lamps, the benefit of the clips means they absorb kinetic energy resulting in less breakages to the elements. A unique, highly efficient parabolic reflector collects and emits heat up to 6 metres away out performing that of any other model on the market.

Mounted into a recognisable, lightweight, robust tubular frame, the swivel head makes the unit more versatile ensuring the heat is directed where it's required.

## FEATURES

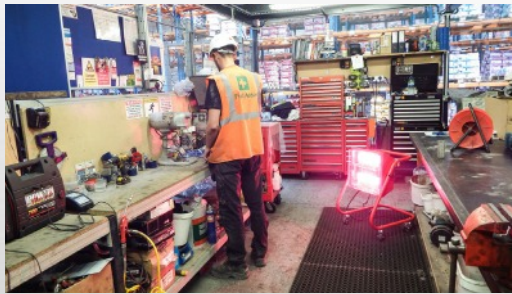

- 1.5kw or 3kw heat output settings
- Unique reflector design
- Robust steel casing and frame
- Swivel head
- Fitted with 4 swivel castors (2 lockable)
- Fine mesh grill for safe use in public spaces

To this day the original design and specification out performs that of any other infra-red heater on the market.
